SimplyFuel Solutions®

An E.J. Ward, Inc. Company

Manage your fuel from one platform

Fuel View Software

Integrated fuel management and reporting for your entire fleet

Fuel View-At-A-Glance, Department-At-A-Glance, and Tank Level Management screens

Ward Fuel View is the industry's most flexible and comprehensive tool for fleet-wide fuel management and control. Monitor key performance indicators and implement validation rules on fuel management and vehicle usage, for comprehensive transaction records for vehicles, drivers, and pumps. Automate and control fuel access, data collection, tank level monitoring, and site reporting.

User-friendly, SaaS interface allows for adding, modifying, and removing asset and employee information. Templates provide faster data entry, reduced entry error, and reporting consistency. Business intelligence based reporting and query functionality provides detailed, decision-making data.

Multiple At-A-Glance screens, group-level reports, pre-configured or easily customizable data fields, and audit trails ensure total accountability, all in near real time.

i See our Capabilities Brochure for our Solutions Overview, and SaaS brochure for more security details.

KEY VALUES

- Only one license needed for unlimited users
- Lower and manage operating costs throughout your fleet
- Automate access to fueling and accounts with absolute certainty every drop of fuel goes into the identified vehicle
- Decrease response time with customizable alerts and alarms for fuel transactions, vehicle usage, and storage tank levels
- Detailed insight to the status of sites, overall fleet and individual vehicles with At-A-Glance screens and reports
- Faster, more accurate fleet analysis with pre-programmed, complex datasets to print, share, and export

FUEL Manage fuel and vehicle fluids in real-time. Oversee your entire fleet's fuel status from anywhere.

EV Fuel View SaaS will interface directly with EV chargers that have OCPP v1.6.

OCPP compliant data availability is based on individual charger manufacture outputs.

Ward
Elevate Your Process™

KEY FEATURES

- Enterprise Class .Net scalable, web-based application
- Minimal need for software support
- Global record updates
- Multi-level, role-based security
- Reports allow grouping up to 10 levels

Security

Completely customizable security features. Define user access levels to assets by division or location; specify levels in any configuration or combination.

- ✓ User authentication integrated with Active Directory
- ✓ User-friendly browser based SSL interface
- ✓ User-specific password roles (manager, operator, analyst, etc.)

Data Query Reporting

Advanced query functions enable analysts to quickly generate customized reports without having to search through lengthy files and records. Fuel View provides the most timely, accurate, and reliable data reporting available.

Interfaces

Fuel View integration options:

- ✓ Fleet Management
- ✓ GPS/AVL
- ✓ HR
- ✓ Security
- ✓ Accounting

ℹ Options run from flat file exports to complete web services database level exchange API's.
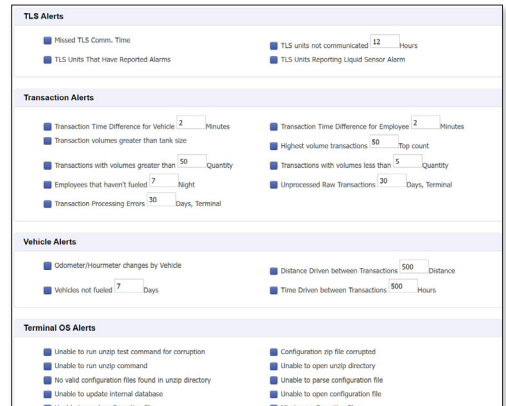

Database

- ✓ Database support for Microsoft SQL and Oracle
- ✓ Database core structure has been preserved so current customers will not loose their custom integrations (exports, 3rd party reporting, etc.)
- ✓ Easily upgradable

Software as a Service

Cloud hosting platform that's secure, reliable and future ready

Working in the cloud maximizes value and ease of use

With only one license, deploy Fuel View software across multiple regions, subsidiaries, divisions, and departments, avoiding the operational costs associated with network expansion and adding additional servers.

Individually tailored solutions are deployed to ensure maximum performance and remain adaptive to your organizational needs, so you will never outgrow the system. Ward's SaaS platform is simple to use and allows for new sites, tanks, pumps, departments, vehicles, and people to be added as your business objectives and goals change.

Each customer is provided with their own virtual environment and dedicated database. Our customers have full password-based access control over their accounts and retain 100% ownership of the data stored in Ward's secure data center.
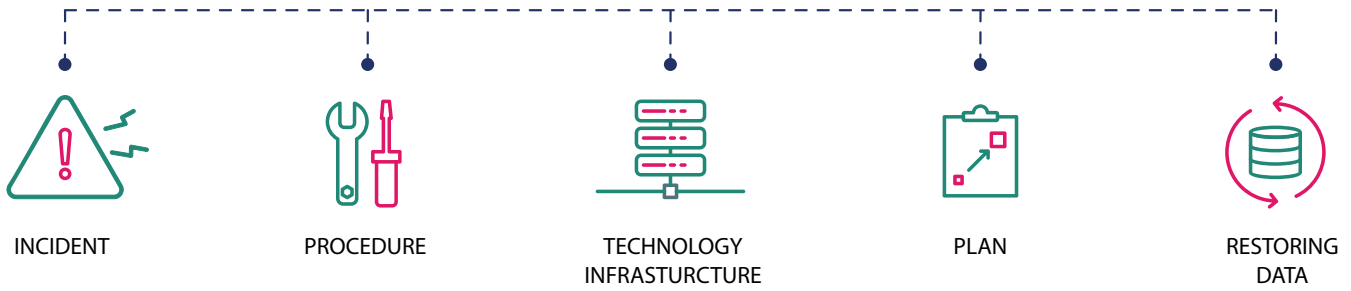

ℹ Secure Ward servers are 100% hosted in US facilities.

KEY BENEFITS

- SOC 2 Certified
- Safely access your data from anywhere
- Never buy software again – all future upgrades are included
- Quicker adoption across your workforce
- Shift responsibility from your IT Department, no server hardware maintenance or repairs

Secure data access

Through fully customizable security features, our customers have total control of user access levels by encrypted password. Audit trails are maintained by who, what (transaction or function), when, as well as data viewed, changed, created, or deleted. Security events are noted by database triggers and are stored as perpetual records in the database. Firewalls and DMZ segregation are in place for all customers.

Security - physical

The data center utilizes multiple layers of security controls including, biometrics, badge readers, locking server cabinets, CCTV, and armed guards. Redundant power and network connectivity. Local emergency generators are present at all locations.

Disaster recovery

Databases are mirrored in real-time, backed up hourly and stored in redundant locations. A full business continuity/disaster recovery plan is in place for each customer, with hardware failover systems tested quarterly. Customers are notified immediately if a disaster or recovery process is implemented.

Customized interface

Ward SaaS offers the option to customize exports and imports between multiple fleet management software products, fuel cards such as WEX, US Bank – Voyager, accounting, HR and access badge security files. Since Ward employs our own world-class software development staff, no request is out of reach for a customized software addition to meet individual business requirements.
