

Programming App

SimplyFuel Toolkit

Simple set-up for fleet vehicles automated fueling

Setting up, adding or changing vehicles, and any fleet asset for fuel management has never been more straightforward. The SimplyFuel Toolkit (SFT) is a rugged programmer that allows the user to quickly setup, and configure vehicle specifics and fueling parameters for their Ward Fuel Management system.

Download the SFT App from the Google Play store to any Android device. The SFT App runs only with a secure Ward Programmer interface dongle.

The SFT app interfaces with Ward Fuel Tags, Hose Modules, and CANceivers. Scan VINs and bar-codes for accurate vehicle identification, program the fuel types and volumes allowed.

Large, easily maneuverable screens guide the user through the programming steps.

INCLUDED WITH SIMPLYFUEL TOOLKIT

Samsung Galaxy A Tablet

Downloadable SimplyFuel Toolkit App

Toolkit Interface and serial cables

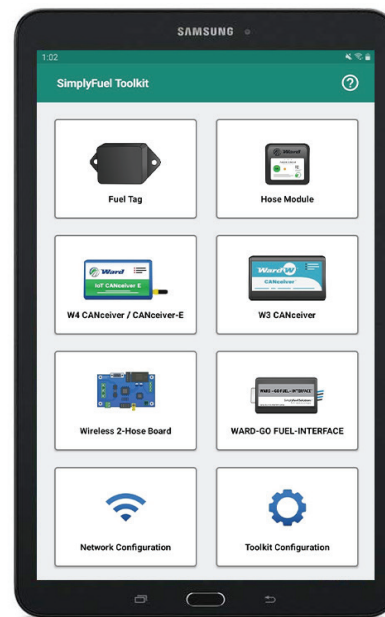

Protective drop case and strap

Tablet charger and charger cable

Cleaning cloth

Android devices sold by Ward or provided by customer.

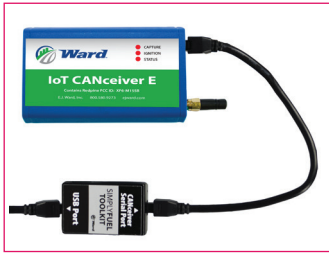

SimplyFuel Toolkit app - Main Menu
